HOWE DELIGHTFUL

Great Walks gets back to nature at the inaugural Seven Peaks Walk on Lord Howe Island.

**Day 1 – Easing into it**

After marvelling at the reef at a glass-bottom boat across the lagoon, the group disembarks in North Bay with Dean Hiscox, our chief guide for the week, who was the island’s ranger for 16 years and has a vast knowledge of Lord Howe. Garden shears in hand to do a little pruning as he goes, Hiscox leads the group through the Kentia palm forest before heading up the bare resemblance of a single track to the top of North Head to claim our first peak of the week. As an elevation of just 105m, it’s a short climb and eases our muscles into the week. At the very north of Lord Howe, the view back to the island’s two main peaks, Mount Lidgbird and Gower, is jaw-dropping, as are the sheer drop-offs. We are also lucky to witness a few remaining red-tailed tropic birds, who call the island home in summer. With two long red streamers, they breed on the northern cliffs, and their acrobatic displays are captivating.

Upon drying off the group headed up to the Old Settlement Beach. A short, sharp climb, at an elevation of 150m, it certainly helped burn off lunch. After the descent we walked past Mutton Bird Point and transit Hill. So after the first day we have already claimed two peaks and walked just over 10km. Dinner was eagerly anticipated: Pinetrees’ famous fish fry, which they’ve been serving for generations.

**Day 2 – Why walk when you can swim**

Lord Howe possesses the southernmost coral reef in the world. Taking advantage of the spectacular weather and tides, our morning is spent snorkelling in the lagoon. Thanks to Lord Howe’s small population (350 residents), Lord Howe’s small population (350 residents), their passion for conservation (no commercial fishing) and very little human intervention, the rock pools only exposed at low tide and low swell. Deep and with crystal clear water, the temptation to jump off rocks into them was just too much.

Deep and with crystal clear water, the temptation to jump off rocks into them was just too much.

Upon drying off the group headed up to the top of Mt Eliza. Another short, sharp climb, at an elevation of 275m, it certainly helped burn off lunch. After the descent we walked past Old Settlement Beach and back to Pinetrees. So after the first day we have already claimed two peaks and walked just over 10km. Dinner was eagerly anticipated: Pinetrees’ famous fish fry, which they’ve been serving for generations.

And to match our week adventure, a buffet of Italian fare, which they’ve been serving for generations.

**Day 3 – Intermediate Hill**

Day three: East Coast – walkers head to Mutton Bird Point and Rocky Run; boat cruise, then with the group headed to Lord Howe’s small population (350 residents), their passion for conservation (no commercial fishing) and very little human intervention, the rock pools only exposed at low tide and low swell. Deep and with crystal clear water, the temptation to jump off rocks into them was just too much.

**Day 5 – Rest day**

Day five: Mount Gower – this is the optional. Stunning views await and a chance to experience a side of Italy that other people only read about, from the Alps to Sicily, and everywhere between.

Hidden Italy self-guided walks give the independent walker the chance to discover a side of Italy that other people only read about, from the Alps to Sicily, and everywhere between. No shuttles or buses, these itineraries are continuous walks, taking you from A to B, through some of the most spectacular countryside in Europe. All you have to do is get up in the morning, pull on your boots and enjoy the walk – we’ll look after the rest...no one knows Italy like we do.

For full details or to order a copy of our brochure, go to www.hiddenitaly.com.au.
coral gardens at Lord Howe are pristine and teeming with marine life.

We explored Comets and Erscotts holes, which are just inside the main western reef which hosts a diverse mix of over 500 marine and 90 coral species.

After an indulgent seafood bbq lunch on the edge of the lagoon, the walking for the day began and it was time to head north again to add the third and fourth peaks to our collection. After skirting Old Settlement Beach, we make the 45-minute, 600+ stair climb through sub-tropical forest to reach a peak named Kim’s lookout. At 200m, it is the highest point so far and upon reaching the peak you marvel in the realisation that you are atop a sheer cliff. Looking north you become mesmerised by the subtle variations of blue of the ocean, while at the same time entertained by the dolphins frolicking at the base of the cliff.

The group then heads south for more iconic views of the entire island to the south as we traverse the ridge between Kim’s lookout to Malabar. Malabar represents our fourth peak and at 210m just eclipses Kim’s as the highest peak to date. To the NE are the Admiralty Islands; Roach Island is the most obvious with its tunnel cut by waves from one side to the other. Again red-tailed tropicbirds perform their death-defying manoeuvres, keeping a close eye on the human intruders.

As we work our way back down the ridge with views of the famous Neds Beach, we reach a plaque on a rock along the trail. It’s a memorial to the seven of the nine airmen killed in September 1948, when an RAAF Catalina clipped the top of the hill and crashed.

Day 3 – Time to head south
A full day with our fifth and sixth peaks. Heading to the south side of the island for the first time, we were up for the challenge of Intermediate and Transit Hills. Intermediate Hill was probably our toughest walk to that point; although the distance to the peak is not that long, well under 2km, the climb itself to an elevation of 250m was certainly not without effort.

At the summit there is a man-made platform offering 360° views including the famous Balls Pyramid. At 561m it’s the world’s tallest sea-stack and situated about 20km south-east of the island.

Probably the highlight of the day was enjoying our gourmet packed lunch at Rocky Run: camped on the black basalt rocks, we watched the waves pound the base of Mt Lidgbird. From there it was a much gentler climb over Transit Hill (120m) before returning to Pinetrees. We covered about 8.5km, which didn’t seem far, but the climbs are getting tougher.

Sunset drinks were followed by another spectacular four-course dinner, the highlight being the freshly caught kingfish, with tomato, avocado, cucumber, capsicum and shallots.

Day 4 – Peak fitness
You can’t summit the island’s second highest peak, Mt Lidgbird; however you can scramble just over halfway up, about 465m, to Goat House Cave, and it’s a perfect gauge to see if you are capable of tackling Gower.

Like Gower, it does require some rope climbs and you need to be comfortable with heights. Starting at the southern end of the island’s runway you enter the forest and are greeted with a steady, steep climb. About halfway up, we are...
getting one of our regular chats from Hiscox when objects start crashing through the forest canopy, scaring the daylights out of the group. It’s also our first exposure to the providence petrels. These sea birds migrate from Siberia to Australia every March to commence courtship and breeding. They fly and collect food during the day, before nesting in the burrows on Lidgbird and Gower by night.

Lord Howe is a birdwatching Mecca with over 170 species and the petrels are the most popular, almost Mr Bean-like. They may be masters of the sky, but on land they are uncoordinated, gangly, yet without a trace of fear of humans. With a high-pitch squeal, you can attract flocks of them to come plummeting from the sky as they search out the source of the noise near their burrows. Upon reaching Goat House Cave, the views north of the entire island make the two hour climb worthwhile.

Day 5 – Australia’s toughest day walk
We had lived in the shadow of Gower all week. It was time. Our group has thinned a little as members made honest evaluations of their climbing ability. Tackling Gower is not for everyone: it’s more than just a hike, it’s a nine-hour round trip, with numerous rope assisted climbs and negotiating wet and slippery trails.

Lord Howe is a birdwatching Mecca with over 170 species and the petrels are the most popular, almost Mr Bean-like. They may be masters of the sky, but on land they are uncoordinated, gangly, yet without a trace of fear of humans. With a high-pitch squeal, you can attract flocks of them to come plummeting from the sky as they search out the source of the noise near their burrows. Upon reaching Goat House Cave, the views north of the entire island make the two hour climb worthwhile.

Upon removing the hard hats it’s then an unbalancing climb to Erskine Creek, where it’s the last chance to rest and top up water bottles before the climb starts. Over the next 1km, the track starts to climb steeply, about 200m, and you’re then on the saddle that separates Lidgbird and Gower. The good news is you’re nearly halfway there; however, the final 450m climb is done in a distance of just over 800m with 17 rope assisted climbs.

“GOWER’S ACTUALLY A TABLETOP, WITH 26 HECTARES OF DENSE VEGETATION.”

At 720m you reach the famed mist forest. This is the level where clouds generally begin to engulf the the peak. The vegetation reduces in height, turning to rainforest covered in moss. When you reach the top you expect a ridged peak, but Gower’s actually a tabletop, with 26 hectares of dense vegetation and home to some of the island’s rarest plants and bird life.

Besides the thousands of petrels, it’s also home to the Lord Howe Island woodhen, which was nearing extinction at the turn of the century, but is now thriving after islanders removed the majority of their predators, like feral pigs.

Once you hit that top, it’s fingers crossed that the lingering clouds retreat and luckily for us they did, revealing the island below from its highest peak. Time for photos and a much deserved break because reaching the summit is one thing, but coming down is another: the descent is much tougher, very much a quad and knee killer.

We all got back to the start in one piece, but a four-hour climb was trumped by a five-hour descent and we were spent. Overall the round trip covered 11km and the only relief to aching muscles was to grab a beer and wade out into the lagoon to watch the sunset.

What a fitting way to finish the week. Great Walks was a guest of Pinetrees Lodge.
